

Aerial Lift Training Prince George

Aerial Lift Training Prince George - An aerial work platform is a mechanical access platform. This particular machinery provides access to otherwise not accessible areas for people or equipment. Also called an elevating work platform or aerial device, the machinery is usually used to be able to access high areas. Construction and maintenance staff usually must make use of aerial work platforms on the job. They are utilized by firefighters for emergency access.

The aerial work platform is meant to temporary application, providing access to high places. They are meant to be operated by one individual, with the capability of lifting weights of less than one ton. Several types have higher load limits. There are a variety of kinds of aerial work platforms; like for instance, there is a "cherry picker" and a "scissor lift".

Some aerial work platforms come equipped with electrical outlets or compressed air connectors for power tools. For specialist jobs, like lifting frames for window glass, an aerial work platform may come along with special equipment.

Anyone needed to operate an aerial lifting machine needs training, along with their supervisors. Members of Health & Safety Committees and representatives responsible for inspecting aerial device work areas likewise must go through training. Those training will become familiar with aerial lifting device operation. They would also learn the regulations which apply to the safe use of these machines. Rules differ from province to province, and within worksites which are federally regulated.

Employees who are required to be lifted or work near an aerial lifting device has to know all the possible dangers. An Aerial Lift Training Video could be shown in a general safety session in order to educate all of the staff who are lifted by them or work near them.

Nearly all Aerial Lift Training Program will consist of modules which are focused on the following areas: hazard Identification; Aerial Lift Devices and Operating Controls; Platform Positioning & Park Positioning and Pre Operational Checks for Aerial Lift Devices. The program is designed to train employees on the safe operation of self-propelled, boom supported elevated work platform and self-propelled, elevated work platform. A certificate will be provided to employees who complete the program, signed by someone qualified to verify successfully finishing a hands-on practical evaluation.
