

Bucket Truck Training Prince George

Bucket Truck Training Prince George - The Vehicle-Mounted Aerial Work Platform or likewise called bucket truck training program is intended to lessen the risk of incident and personal injury while working with or in close proximity to bucket trucks by effectively training operators who are qualified. An aerial lift device is any vehicle-mounted device, articulating or telescoping, or both, that is made use of to position workers to reach spots that will otherwise be unreachable. Aerial lift devices are used to elevate workers to above-ground work locations.

The program aims to provide operators with the skills, knowledge, training materials and abilities needed to be able to safely and efficiently operate vehicle-mounted aerial work platforms.

The program comprises a hands-on training session and a classroom training session. To be able to become certified, participants should be successful in both components. A full-size certificate and a wallet-size certificate would be issued upon completing the program.

The types of lifts examined in the program include Aerial lift devices are usually made of metal, wood, reinforced plastic, fiberglass or other materials.

Definitions

Articulating boom platform: multiple hinged boom components.

Extensible boom platform: has an extensible or telescopic boom.

Platform: the component of an aerial device which is designed to carry staff.

Mobile unit: any aerial device together with its components like for example vehicle and related equipment.

Employees who work with aerial devices have the responsibility of making certain that they are properly trained and authorized. Employees should make sure that individuals who are not authorized and trained do not utilize lift devices. Employees should make sure that they wear the proper protective equipment while working from the platform.

The course content utilized in the bucket truck training program consists of the operation of the vehicle-mounted aerial work platform, safe operating practices, pre-shift inspections, lifting capacity, use of emergency controls, and administering practical and theory tests. Operators will learn rules under the federal and local regulations.
