

## **Aerial Lift Train the Trainer Prince George**

Aerial Lift Train the Trainer Prince George - The train the trainer program for aerial lifts helps to teach the trainers how to safely train prospective operators in an industrial setting. Trainers will be given in-depth instruction about the workings of aerial lift equipment. The program is offered on an open enrollment basis and delivered at selected training places. Prior to certification, trainers are evaluated and graded based on their demonstrated skills and knowledge.

The Aerial Lifts Train the Trainer Certification Program focuses on practical learning and as the best training provider within the industry, we offer top notch hands-on training. We provide plenty of chances to practice the techniques and concepts which are learned within the classroom. Along with hands-on experience, trainers develop general understanding of equipment theory and instructional methods, field and classroom communication skills, and ability to effectively train and assess operators. Trainers would gain an understanding about what traits make a successful trainer.

The Aerial Lift Train the Trainer Certification Program teaches the instructional techniques involved in communicating concepts in a classroom and/or field condition. Knowledge requires a training part to be effective in workplace environments. There are three aspects of machinery operation which the trainer should learn how to convey to operators: what to perform; how to do it; and why it should be done.

The program offers detailed, up-to-date reference material to be able to help trainers convey the subject matter to machine operators. Guidebooks include detailed information regarding all aspects of industrial mobile equipment operator training. Included within the package are training aids which provide a visual reference in order to enhance the learning experience. The equipment-specific training products include important materials for both the operator and the trainer: overhead transparencies, videos/DVD's, safety message posters, kinds of equipment; stability pyramids and digital training aids.
